Date Added to List	Detected on Date	Item ID	Summary	Module	Priority	Target Release	Release Notes
1/16/2018	1/12/2018	12019	After R47 Price Change Mail.XML First Class Section B Mapping to B4 should map to B5	Mail.dat & Mail.XML	03-High	1/21/2018	Mail.XML postage statement processing will be updated to correct mapping logic for First-Class Mail Section B. This affects First-Class Mail postage statements submitted via Mail.XML containing pieces with Processing Category LT (Letter), Rate Category S (Single Piece), Rate Type R, MPU Surcharge N, Price Type RETAIL, and weight over 1 ounce and less than 3.5 ounces, or weight less than or equal to 1 ounce. As part of the January 7, 2018 *PostalOne!* System release, mailpieces that previously mapped to postage statement line B7 (Nonpresorted/Single-Piece) are now incorrectly mapping to line B4 (Residual From First-Class). Following the price change effective date on January 21, 2018, these mailpieces will correctly map to line B5 (Nonpresorted/Single-Piece).
1/16/2018	1/10/2018	12009	Pre-Price Mixed Class Comail statements fail to finalize all statements	Domestic Postage Processing	03-High		For Mixed Class Co-Mail mailings with mailing dates prior to January 21, 2018 (i.e., prior to the price-change effective date), not all postage statements are able to be finalized. For example, in a Mixed Class mailing of Periodicals and USPS Marketing Mail, only the Periodicals statements are finalized. As a temporary workaround, users can split their Mixed Class Co-Mail statements.
1/10/2018	1/8/2018	12003	15-1 Mail.dat periodical job submission failures with FSS sort package level	Mail.dat & Mail.XML	02-Medium		For Periodicals submitted via Mail.dat version 15-1, processing will be updated to correctly handle submissions with package level "X" (FSS sort). Currently submissions of this type encounter an internal error due to a mapping defect affecting package level "X" in Mail.dat 15-1. As a temporary workaround until the resolution is implemented, mailers can use Mail.dat version 17-1 or they can update the package level of "X" to another package level within Mail.dat version 15-1.
1/10/2018	1/8/2018	12001	Regression Automation: TEM - Unable to finalize Mailer Affixed Neither and Affixed Lowest statements	Postage Statement Wizard	03-High		An issue will be corrected in the Test Environment for Mailers (TEM) to properly handle completion of postage statements with Affixed Neither and Affixed Lowest postage requiring additonal postage. Currently, for statements where the Affixed Neither postage is insufficient, when the user completes the Net Postage Adjustment Amount section with permit information and clicks Submit to complete the statement, an error occurs. The Net Postage Ajustment Amount section is cleared and the following error message appears: "Error! Please enter a Permit Number for Net Postage Adjustment amount".
1/10/2018	1/7/2018	11997	BNS 634 - PW USPS Marketing Mail - Letters - Carrier Route Warning in PW is incorrect	BCG	01-Low	1/21/2018	The *PostalOne!* System Postal Wizard validation messaging will be updated to be consistent with the validation messaging in the Business Customer Gateway (BCG). For USPS Marketing Mail Carrier Route Letters, an incorrect validation message appears when the number of pieces on the Carrier Route lines does not meet the minimum. The validation logic is functioning properly; however, the validation message should be: "Carrier Route price lines require a minimum of 10 pieces (C1)."
12/27/2017	12/20/2017	11942	Customer Satisfaction Survey - modify some districts names to match Customer Insight system	Customer Information Management	02-Medium	3/25/2018	The Customer Satisfaction Survey process will be updated to ensure that the district name used in the body of the survey email message adheres to the USPS Customer Insight team's naming convention. For some districts, this will entail displaying a different name from the district name used in previous Customer Satisfaction Survey email messages (e.g., "Greater South Carolina" would display in the survey message as "Greater S Carolina").
1/2/2018	12/20/2017	11941	Modify the verbiage of the outgoing Customer Survey E-mail message	Customer Information Management	02-Medium	3/25/2018	The text of the outgoing Customer Satisfaction Survey email message will be updated to provide several user-friendly modifications. The following line will be added to the end of the first paragraph: "If someone other than yourself interacted with the DMU, please forward this survey to them." The line "Please click the following button to access the survey" will be enlarged and displayed in boldface font. The line above the survey link URL will be modified to advise the user to copy and paste the entire URL into their browser. The revised line will be: "This email was sent to <username.email>. If the above link does not work, copy and paste this FULL URL into your web browser".
1/2/2018	12/14/2017	11910	ContainerID XML construct mismatch between QualificationReportCreateRequest and ContainerReleaseVerified	eInduction	01-Low	3/25/2018	eInduction validation will be updated to impose the same restrictions on the ContainerID in a QualificationReportCreateRequest message as in the more restrictive ContainerReleaseVerified. The ContainerID in a QualificationReportCreateRequest message will be required to have a minimum length of 6 characters instead of the current minimum of 1 character. In addition, the QualificationReportCreateRequest message will only accept numeric characters for the ContainerID, not alphanumeric as it currently does. Currently, as a result of the mismatch between the allowed contruction of the Container ID in these two messages, some containers are arriving as "Accepted-Not Expected". In order for mailer container information to flow to the entry facilities, the data must pass through both the QualificationReportCreateRequest and the ContainerReleaseVerified messages.

Date Added to List	Detected on Date	Item ID	Summary	Module	Priority	Target Release	Release Notes
12/5/2017	12/4/2017	11838	FCPS is not getting NSA rate for line S7 Signature Confirmation Restricted Delivery Electronic for a manual statement.	BMEU	03-High		For manual First-Class Mail postage statements, processing will be updated to properly handle retrieval of the Negotiated Service Agreement (NSA) rate for line S7 (Signature Confirmation Restricted Delivery Electronic).
12/18/2017	11/28/2017	11799	Mail.dat: the Pallet sibling containers are being incorrectly charged double	Mail.dat & Mail.XML	02-Medium	3/25/2018	A defect will be corrected for Mail.dat job submissions that include a pallet sibling that is not the sibling of a logical pallet with physical children. This scenario currently results in the container incorrectly being charged double.
12/12/2017	11/14/2017	11718	Fees for Parcel Select, Media Mail and Library Mail should be $0 (since R45 at least). PO! shows $225 per class.	BMEU	03-High		The *PostalOne!* System will be updated to properly handle annual mailing fees for Parcel Select Mail (destination entry or Lightweight), Presorted Media Mail, and Presorted Library Mail. There is no annual fee for mail in those classes. The Fee Payment Confirmation page incorrectly shows a fee of $225 for transactions in those mail classes, but should display $0 instead.
12/18/2017	11/8/2017	11678	Mail.XML Combined Mailing Autofinalization call timing	Mail.dat & Mail.XML	03-High	3/25/2018	A Mail.XML auto-finalization timing defect will be corrected that is currently causing a display issue on combined mailing submissions that include BeginCombinedMailingRequest and EndCombinedMailingRequest blocks. As a result of the issue, the status of such postage statements may display as "UPD" (USPS Processing Due) instead of "FIN" (Finalized).
10/02/2017	9/20/2017	11449	Mail.dat: the server error 7079 is not being thrown properly for package services	Mail.dat & Mail.XML	02-Medium		For Package Services submitted via Mail.dat with two different Mail Piece Unit (.mpu) Machinability Indicator values, the validation logic for Mail.dat server error 7909 will be updated to properly account for the different Machinability Indicator values. Currently, Mail.dat error 7909 is incorrectly generated in this scenario. The description for error code 7909 is: "There were duplicate postage statement lines (Section: A, Line Number 40) generated for a postage statement with Mail Class (4)". As a temporary workaround, users can set the .mpu Machinability Indicator to the same value for each record.
8/8/2017	8/2/2017	11297	Remove obsolete verbiage from Low balance alert sent to BCG mailer when account balance drops below set level	Mailer View Functionality	02-Medium		The low balance alert message will be updated. This is a warning that is sent to Business Customer Gateway (BCG) mailers when their account balance drops below a pre-set level. The following out-of-date text will be removed from the message: "If you are a Full-Service mailer, you can now add funds at any retail unit that supports *PostalOne!* transactions. Other customers may add funds at the retail unit that supports their local Business Mail Acceptance site."
8/1/2017	7/12/2017	11233	Fee waiver status display on Balance and Fees update required	BMEU	02-Medium		The Balance and Fees page will be updated to correct the display of fee and fee waiver status information. This is a display issue only.
9/19/2017	5/2/2017	11000	Mail.xml - Create a validation to ensure PendingPostageAmount is correctly calculated by the mailer in the PeriodicalStatementCreateRequest	Mail.dat & Mail.XML	01-Low		A new Mail.XML validation will be created to ensure that the PendingPostageAmount is correctly calculated by the mailer in the PeriodicalStatementCreateRequest. Currently the PendingPostageAmount provided for Pending Periodicals mailings isn't validated to ensure that the value provided is equal to the USPS Marketing Mail postage equivalent of the mail provided. If this value isn't specified correctly in the eDoc and a publication application is denied, then the postage amount due could be understated. In addition, Mail.XML will also create a USPS Marketing Mail postage statement from the information contained in the PeriodicalStatementCreateRequest so that there is an audit trail for postage while the application is pending.
3/8/2017	3/6/2017	10766	Issue Level Postage Statement - Report not displaying for some permit accounts - possibly a browser issue	Reports	02-Medium		An issue will be corrected to ensure the Periodicals Issue Level Postage Statement can be consistently displayed. Currently, the Periodicals Issue Level Postage Statement is not displaying for some permit accounts.
11/13/2017	2/8/2017	10666	Mail.xml; The schema for ContainerStatusQuery Response does not contain valid values for entry facility type	Mail.dat & Mail.XML	02-Medium	3/25/2018	The Mail.XML schema for ContainerStatusQueryResponse will be updated to include additional valid values for entry facility type (entryFacilityType). Currently, the values for Mail.XML entryFacilityType only include O, B, S, D, A, W, and H. Additional valid values are K, L, J, C, E, and R to accommodate the scenario where containers entered through Mail.dat have their status requested through Mail.XML. eDoc submissions are not rejected as a result of the additional valid entryFacilityType values not being included in the Mail.XML schema. However, users may not be able to get the einduction status for those containers where the entry point is origin Sectional Center Facility (SCF).
01/23/2017	1/22/2017	10593	PDF download of PS Form 3600 First Clas Mail postage statement displays Part A Total rounded incorrectly	BMEU	01-Low		The downloadable PDF format of First-Class Mail postage statements will be updated to display the "Part A Total" using 2 decimal places for consistency with the online postage statement, as specified in DMM 604 section 7.1.2, Expression of Numerical Values. This is a display issue only on the downloadable PDF for First-Class Mail postage statements, and does not affect the postage charged on the statements.

Date Added to List	Detected on Date	Item ID	Summary	Module	Priority	Target Release	Release Notes
11/13/2017	11/2/2016	10268	Update Mailing Agent Permit schema for Mail.XML - V21	Mail.dat & Mail.XML	02-Medium	3/25/2018	The Mail.XML schema will be updated in Version 20.0 to create a new complex type to identify Mailing Agents by Mailer ID (MID) or Customer Registration ID (CRID), and will not require permit information for this purpose. The new data element, mailerMIDCRIDDataRequestType, will require either the MID or CRID for Mailing Agents and will be used for incoming requests in the MailingOwnerData and MailingAgentData blocks. The existing element mailerDataRequestType will continue to be used for incoming requests in the PermitHolderForAPData, PermitHolderData, and PublisherData blocks. The existing element mailerDataType will continue to be used for outgoing responses where all blocks are currently optional.
10/13/2016	10/11/2016	10149	Mail Owner Report does not show name of mail owner for single mail owner statements as part of a combined mail	Reports	02-Medium		For postage statements which are part of a combined mailing and which have only one mail owner, the Mail Owner name is blank on the Mail Owner Report accessed from the *PostalOne!* System Dashboard.
05/09/2016	5/3/2016	9528	Outside County Container Report for Mail.XML is not accurate - defaulted to destination entered and ignoring origin entered.	Reports	02-Medium		The Outside County Container Report is displaying the incorrect container entry level for Mail.XML Periodicals submissions. The report process currently populates the container entry level with the destination entered from the Entry Point Facility Type on the Qualification Detail request. However, for Mail.XML that source does not differentiate between destination and origin entered. Using the default of destination entered can cause the Origin Area Distribution Center (ADC), Origin Sectional Center Facility (SCF), and/or the Origin Network Distribution Center (NDC) to be incorrect on the Outside County Container report. For Mail.XML Periodicals submissions, the report process will be updated to populate the container entry level from the Periodical Statement Create request.
05/09/2016	4/21/2016	9480	SN - INC000001324732 - Update Non Profit System to allow email address ending in other than .edu, .com., .org	NonProfit	02-Medium		The Non Profit Application Authorization System will be updated to recognize email addresses with more than 3 characters in the top-level domain name. This will allow the system to accept email addresses with extensions other than .com, .net, .gov., .org, etc. (e.g., xyz@testuser.info).
2/2/2016	2/1/2016	8964	In MERLIN the Presort postage is incorrectly subtracted from USPS Total Adjusted Postage.	Domestic Postage Processing	03-High		MERLIN Presort Postage is incorrectly being subtracted from USPS Total Adjusted Postage. Lower than expected postage amounts are displayed when a job is processed by MERLIN and manually finalized.
11/10/2015	10/30/2015	8429	Standard Mail Register, First Class Container List Report, Consolidation and Confirmation of Sibling Container Inclusion	BMEU	03-High		The USPS Marketing Mail Register and the First-Class Container List Report will be consolidated into one report, which will be enhanced to include sibling container counts. In addition, an issue will be corrected that sometimes causes the current standalone USPS Marketing Mail Register report to respond inconsistently when users drill through the container count of each entry facillity type to the containers by entry point ZIP Code.
8/7/2015	8/11/2015	7814	Periodicals Postage Statement Register possibly showing duplicate data	Reports	03-High		Periodicals Postage Statement Register is showing duplicate data. On the Periodicals Postage Statement Register, the main postage statement of a consolidated statement is included, and the calculated totals display as double of what they actually are on the Postage Statement.
9/6/2017	3/25/2015	6787	Cleanup mm entryDiscountType	Mail.dat & Mail.XML	01-Low	3/25/2018	For Mail.XML submissions, enumerations "C" and "K" will be removed from the list of possible values for entryDiscountType. In Mail.XML 21.0, the *PostalOne!* System will only support the following values for the Entry Discount Type field (entryDiscountType): N, B, S, D, A, P.
12/8/2015	7/3/2013	1684	Update Job, Appointment Summary reports header to display CRID instead of permit information	eInduction	01-Low		The Job Summary Report will be updated to display the company name associated with the Customer Registration ID (CRID). Currently, the Job Summary Report displays the company name of the permit instead of the CRID. This is a display issue only, and impacts all mail classes and processing categories submitted by Mail.dat.
