1.0 Introduction

On Sunday, March 3, 2019, the United States Postal Service implemented the following software change:

- *PostalOne!* System Release 48.0.2.2

These Release Notes provide the contents of the release and affected subsystems.

The section titled **Corrections to Known Issues** is derived from External Trouble Reports (ETRs) and Engineering Change Requests (ECRs) for inclusion in this release.

This document is prepared based on the knowledge available at the time of its publication and any element may be subject to change prior to publication.

2.0 Mail.dat Client Support

Please note the following regarding the Mail.dat client download.

There is no new Mail.dat client version with this release. Users should continue to use their current Mail.dat client version. The current Mail.dat Client may be downloaded from the Business Customer Gateway (BCG) using the following path: Mailing Services → Electronic Data Exchange [Go to Service] → Mail.dat download (Windows 32-bit, Windows 64-bit or Solaris).

3.0 *PostalOne!* System - Corrections to Known Issues

3.1 Electronic Data Exchange

For Mail.dat Periodicals (PE) co-mail jobs paid for with permits linked to both Enterprise Payment System (EPS) and non-EPS accounts, an issue was corrected that previously resulted in failure of these jobs with an internal server error. The error was generated when the process incorrectly tried to store a 10-digit EPS account number in a non-EPS account field which only allowed 9 digits. The account number field has been expanded to alleviate the error.
