Validate service measurement for bundles/newspapers entered at DDU

If Full Service bundles/newspapers are entered at DDU - AND contain the necessary documentation and/or barcodes (eDoc/99M) – AND the bundle visibility 99M distribution scan is performed – it can be included in measurement

Provide additional analysis on DSCF/DNDC/Origin entry volumes and the potential shifts due to pricing changes (beginning in 2016); breakdown by product category for letters and flats

Percent of Volume_Flats - DNDC, DSCF, DDU & Non Discount

Percent of Volume_Letters - DNDC, DSCF & Non Discount

Provide further breakdown of no show data by facility, vendor, rescheduled, reoccurring

Use the IV “SPM Exclusions by Area” tool to select a specific Facility or Mailer

Use the tool's ranking by volume to identify a specific Facility-Mailer pair to investigate

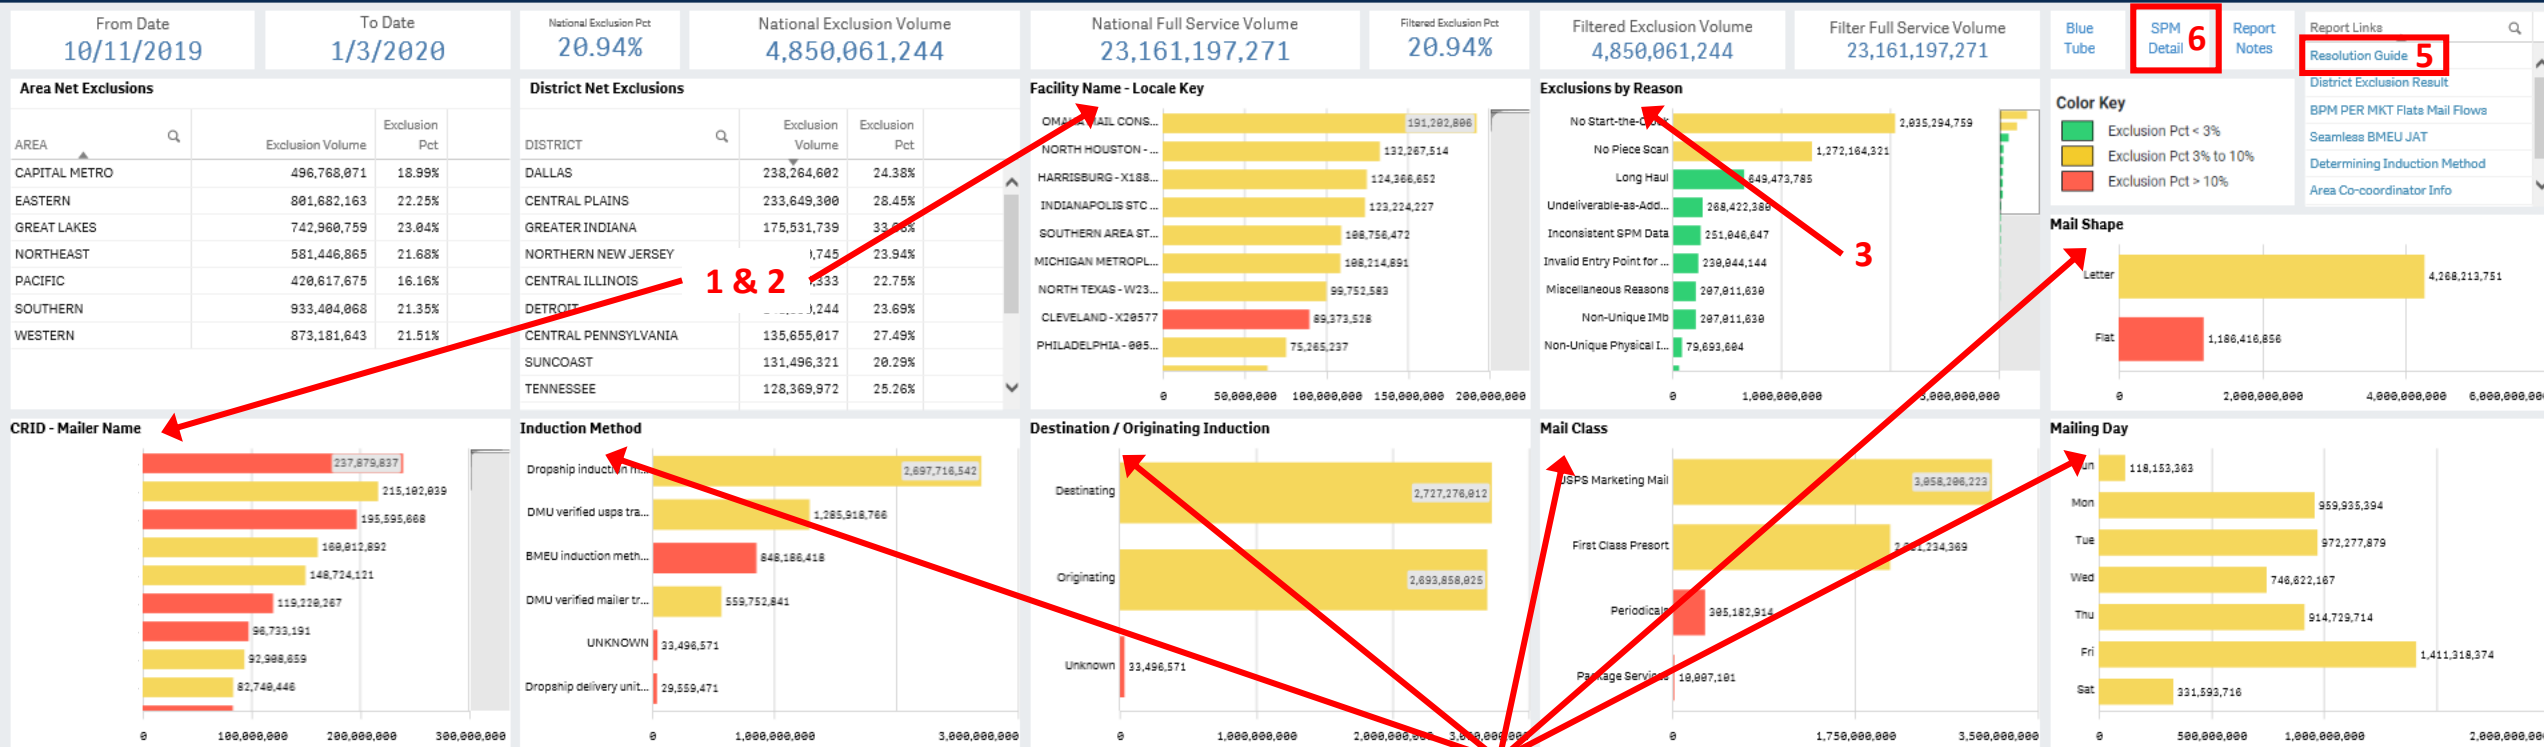

Use the tool's Exclusion by Reason ranking to identify a specific reason to investigate

Use the tool's other filters to define the greatest opportunity pattern to investigate

Use the Resolution Guide to identify possible defects, root causes, and resolutions

Use the SPM Detail sheet for job specific data to assist with identifying the defect and the root cause

Use existing relationships to collaborate with Facilities and Mailers to apply the resolution and monitor for inclusion and sustainment

4

Resolution Guide for Commercial Mail Excluded from Measurement

(rev 11.07.19)

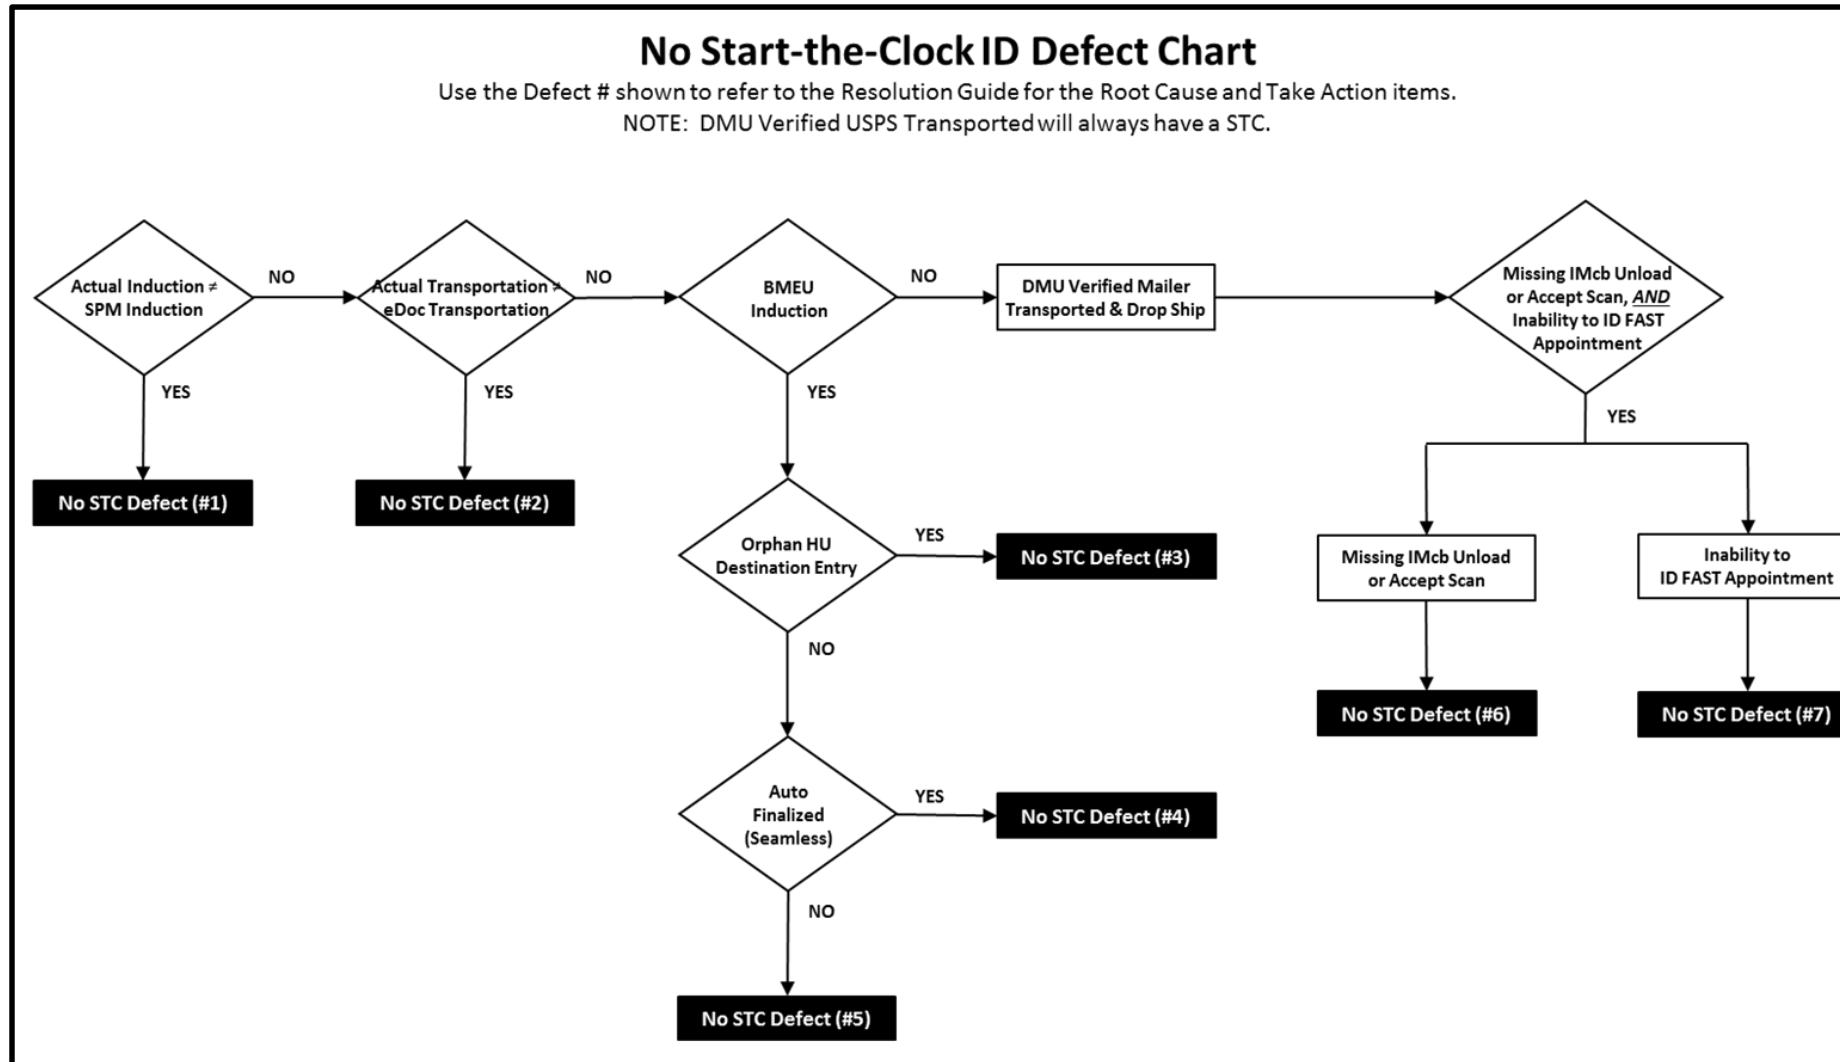

Resolutions

Use this link to contact [SPM Exclusion Feedback and Support](#) with any questions or feedback regarding the resolutions listed below. If you find additional root causes or actions to take that are not listed, then please send them to the same email link so they can be added.

Exclusion Reason	ID Defect	Confirm Root Cause	Take Action
Non-Unique Physical IMcb (actual container placard)	Duplicate IMcb scans associated with multiple containers	<ul style="list-style-type: none"> ✓ Mailer is not preventing use of duplicated container placards ✓ USPS is not using a unique 99Z trailer barcode for each trip of mailer transported containers that are unloaded at a USPS processing/network acceptance site ✓ USPS is not associating the 99T trailer barcode with either: 1) a departure scan between each trip of containers unloaded at the same USPS acceptance site, or 2) associating the 99T trailer barcode with an arrival scan at another USPS site 	<ul style="list-style-type: none"> ➤ Contact Mailer and request to not duplicate physical IMcb placards ➤ Mailer Transport: USPS operations ensure compliance with SV scanning SOP for mailer transported container acceptance (DMUVMT, Drop Ship) ➤ USPS Transport: USPS operations ensure compliance with SV scanning for trailer events
Orphan Handling Unit (tray, tub, or sack)	Mail piece is associated to a loose tray, tub, or sack (HU) that <u>was not inducted</u> at a BMEU	<ul style="list-style-type: none"> ✓ DMU verified tray, tub, or sack is not associated with a container in the eDoc 	<ul style="list-style-type: none"> ➤ Local site action is not available – DMU orphan HU's are always excluded
Unknown Entry Facility	No entry facility identified by the Locale Key, Postal Code or FDB ID provided in the mailer eDoc	<ul style="list-style-type: none"> ✓ Locale Key entry is ORIGIN <u>and</u> the Entry Point Postal Code is not valid for any USPS site ✓ FDB is not accurate (site missing, or wrong or missing locale key or postal code in site record) 	<ul style="list-style-type: none"> ➤ Contact mailer and request one of these eDoc entries are corrected for future mailings: 1) the Locale Key is a valid USPS site, or 2) the Entry Point Postal Code is a valid USPS site ➤ Escalate to local USPS AMS to correct data in FDB

7

No Start-the-Clock occurs when the induction method and/or the AET cannot be established by analyzing data from input systems, such as eDoc, PostalOne!, and Surface Visibility.

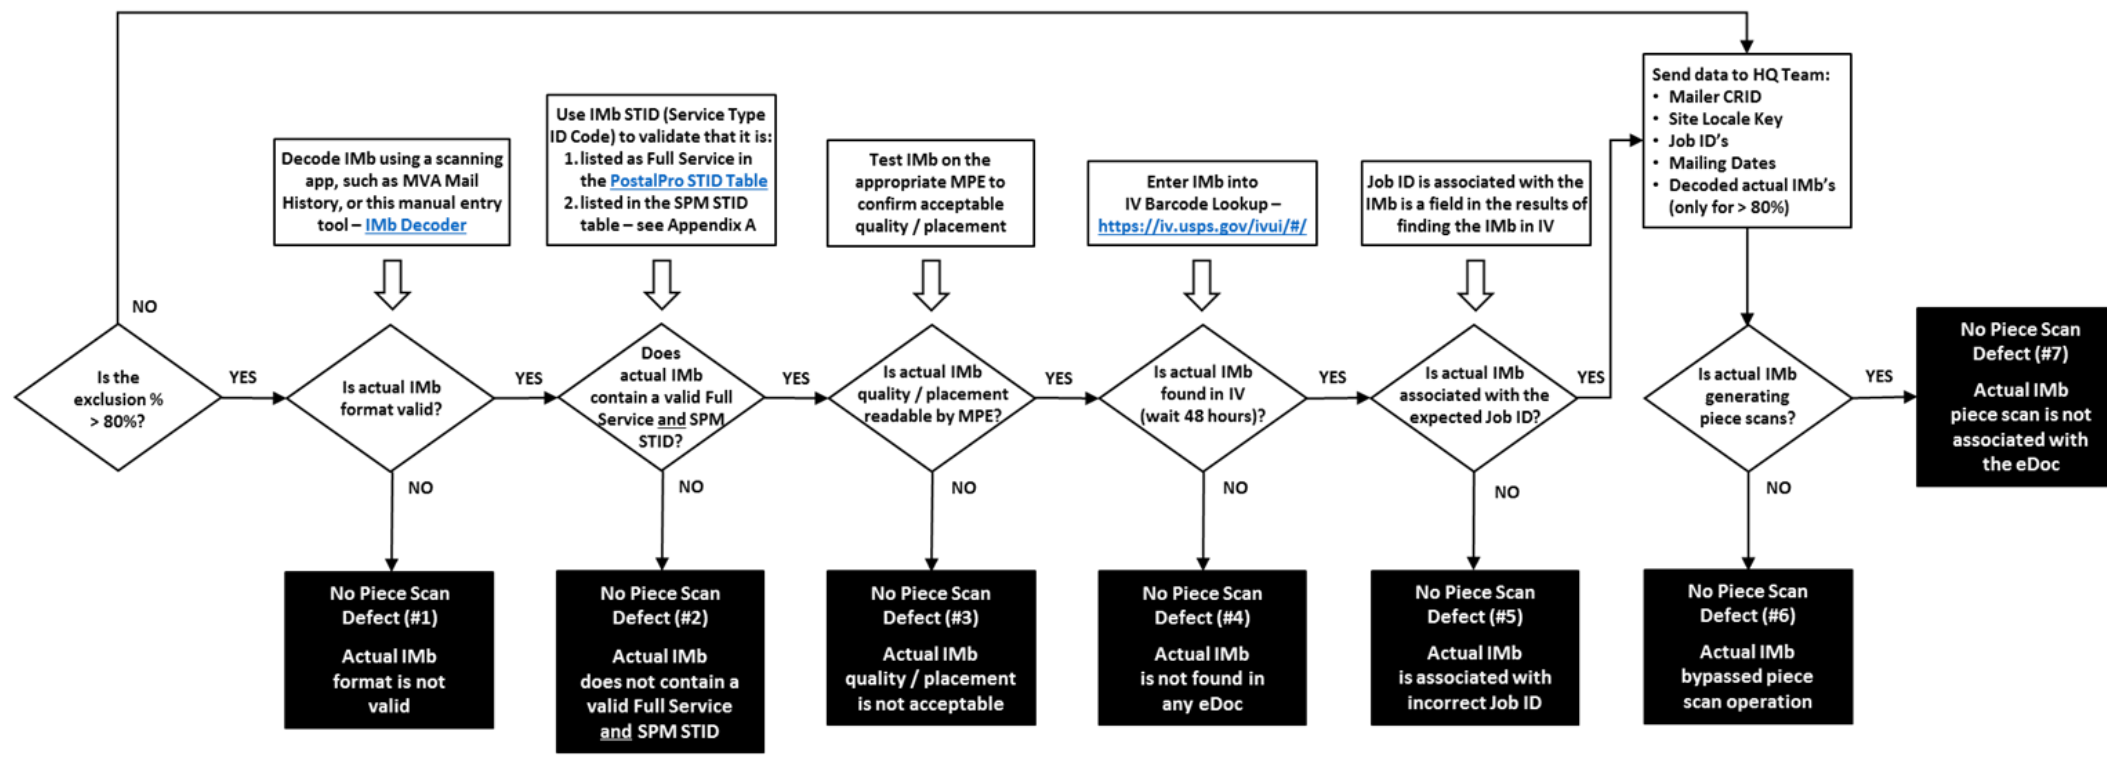

No Piece Scan occurs when the IMb codes provided in the eDoc do not receive USPS visibility scans in operations that establish the anticipated delivery date.

No Piece Scan ID Defect Chart

Use the Defect # shown to refer to the Resolution Guide for the Root Cause and Take Action items.

1. Answer the questions in the flow chart from left to right – follow the instructions above each diamond when provided.
2. For exclusion %'s from 80% - 100%, collect at least 25-30 actual IMb's from the mailing before proceeding to the second diamond – use a diversity of preparation levels, e.g. AADC, ADC, 3D, 5D, CR.

NO START-THE-CLOCK

OIG Audit on Mail in Measurement

The OIG conducted an audit on volume excluded from Service Performance Measurement.

Top 3 exclusion reasons from the OIG audit:

1. No Start-the-Clock
2. No Piece Scan
3. Long Haul

Root Cause

One of the main reasons identified for No Start-the-clock is due to electronic documentation not getting updated post finalization to reflect any changes to the actual mail (containers) being physically inducted.

Resolution

In order to reduce mail being excluded from measurement due to containers that are included in the finalized eDoc but not physically inducted, there needs to an approach to identity and remove containers that were not physically inducted from service performance evaluation.

1. Interim – Mailers provide USPS containers via email to be removed from service performance evaluation
2. Short Term – IV API to exchange data with mailers
3. Long Term – Update to Mail.dat spec so the mailers can submit changes via PostalOne! and all USPS systems (e.g. SV) will receive the update

LONG HAUL

USPS Transported Start-the-Clock Updates

Start
the
Clock

**Depart Mailer
Facility**

**Transmit
GPS Data**

Arrive Trip

Unload Trip

1. Mailer requirement:

- Content associated to trips through MVA, FAST or eDoc.

2. USPS requirement:

- Leverage breadcrumb data collected from MVA, PVS, or OrbComm to determine mailer facility departure.
- Perform container unload scan to verify possession of content associated to a specific DMU trip/trailer.

3. USPS STC update:

- Actual Entry time will be set to the time the trailer departs the mailer facility based on the first GPS breadcrumb time that breaks the mailer facility geo-fence.

* When the above requirements are met, Long Haul trips have potential to be included in measurement

TRANSPORTATION UPDATE

Accomplishments

- 12/3/2019: Reviewed and Updated Mission Statement, Objectives, and Impact/Desired Results/Area of Focus
- 12/17/2019: Defined Data Exchange Requirements & Pilot Debrief
- 1/14/2020: 2 Way Communications & Defined IV®-MTR JSON API Message Content – Returned

Next Meeting

- USPS Transported Mail
 - eDoc Modifications for the Trailer barcode for content Provisioning
 - Additional eDoc fields to include
- Define Provisioning
 - To IV, PostalOne! and FAST: Determine how data will be received to associate content to appointments
 - From IV: Determine what data will be provisioned back from IV

Completed 4 pilots successfully testing GPS transmission and arrivals based on GPS coordinates.

Summary

- Completed pilots to test out GPS transmission and Geo based arrival at drop shipment facilities across the country
- Further pilots will test two-way communication and interaction with the USPS dock personnel to confirm appointments and schedule dock doors

Findings

- GPS Float: Precision on the trackers needs to be set at a level to identify when in the facility polygon to leverage the time for arrival
- GPS Frequency: To leverage the GPS data for geofence breaks the frequency needs to 1 min pings to ensure time at the facility is properly recorded

Tracked 7 long haul trips leaving Pitney Bowes Des Moines Detached Mail Unit to multiple USPS facilities over the week of November 19th

Tracking Summary

Tracking

- All trailer load and depart events transmitted to all downstream systems including SV, IV and PTR.
- GPS Tracking of 7 trailers over 2 days of departures
- Load Scans performed at the DMU on 11/20 for 2 trips

Reporting

- Geo Site Depart Events captured by TRP-GEO for 7 trips
- GPS Breadcrumbs – 7 trips

Date	Route	Trip	Destination	Trailer Barcode
11/19	840L3	8433	SALT LAKE CITY STC, UT	99T000000255679
11/19	751ME	7502	SOUTHERN AREA STC, TX	99T000000319661
11/19	500AE	4607	INDIANAPOLIS P&DC, IN	99T000000231768
11/19	500AE	4625	INDIANAPOLIS STC, IN	99T000000238572
11/19	381Y3	601	MEMPHIS STC, TN	99T000000533690
11/20	840L3	8433	SALT LAKE CITY STC, UT	99T000000168176
11/20	500AE	4607	INDIANAPOLIS P&DC, IN	99T000000342422
11/20	500AE	4625	INDIANAPOLIS STC, IN	No login to app

Through each of the 7 trips valuable data was captured to give USPS visibility and allow for additional mail to be included in measurement

Key Findings

- GPS trackers provided the initial break at the DMU in all cases when MVA TV data was used.
- MVA provided load scans for 2 trips departing on 11/20
- The pilot illustrated the potential to significantly increase visibility throughout the surface network.

Enhance Usability	<ul style="list-style-type: none"> API enhancements 	<ul style="list-style-type: none"> API enhancements 		

Key Requirements

- IV-MTR will receive campaign data and provision access to mailers through standard IV-MTR application features and options.
 - IV will provision data using existing real-time data feed types/file formats
- IV will only provide Informed Delivery Post-Campaign detailed report data.
 - Post-Campaign summary report data will not be available in IV (future enhancement).
 - Post-Campaign summary data will continue to be available on the Mailer Campaign Portal
- Delegation rules will be similar to existing rules within IV
- ID data will also be available via One Time Query

- Unexpected Event Reporting continues in design and development
- Expect to provision data in future
- No timeline is available at this time

627-631	Height	N(5)	Dimensional Height	Defined as: 999v99 2.50 Entered as:00250	<ul style="list-style-type: none"> Leading zeroes required, when populated. Default to zeroes, when not applicable. Height in inches. Required for GXG and domestic Priority Mail Local and Zones 1-9 Required for any rate indicator Cubic Tier pricing. Zero-filled if not applicable. Required when rate indicator = DR or DN. If DR or DN is not populated in Rate Indicator, but dimensions (LxWxH) are provided then parcel will be assessed as dimensional.
632-781	IBI	Base64(150)	<p>Information-Based Indicia (IBI) - Refers to a secure postage evidencing standard used by the United States Postal Service (USPS) to indicate electronic postage payment.</p> <p>The barcode data contains such information as amount of postage, origin zip code, destination, mail class, weight, confirmation/tracking numbers, and a cryptographic signature. The human-readable information shows at a minimum the information required by the USPS Domestic Mail Manual (DMM).</p>	AAFIBKAMD1004Awe8 A4UHEAPwrAEp5Mw GVcwEA9wsAAAAAA AAAAAAQhKwANzUw MFgo/AFctgtL06vQQx BOBo5IVkcnjgbyufrCw +wefRANHl6//sMR6oY IBKV8AAAAIAAAAAAA	Required for PC Postage and Meter Vendor

For PRS, determine any impact to the locale key if a wrong ZIP is input

- The locale key is determined by the facility configuration for the IMD
- The locale key cannot be changed even if the user enters the incorrect ZIP Code

UPDATE STANDARDS REVIEW

Survey Results

- 84% respondents perform activities that impact mail production and mailing.
- 94% receive database product updates electronically and 84% receive them monthly or more frequently.
- 100% update their list every 60 days or more frequently and 99% are able to mail within 2 months after updating.
- USPS will be reviewing results with other internal stakeholders to assess impact

Use the IV "SPM Exclusions by Area" tool to select a specific Facility or Mailer

Use the tool's ranking by volume to identify a specific Facility-Mailer pair to investigate

Use the tool's Exclusion by Reason ranking to identify a specific reason to investigate

Use the tool's other filters to define the greatest opportunity pattern to investigate

Use the Resolution Guide to identify possible defects, root causes, and resolutions

Use the SPM Detail sheet for job specific data to assist with identifying the defect and the root cause

Use existing relationships to collaborate with Facilities and Mailers to apply the resolution and monitor for inclusion and sustainment

Resolution Guide for Commercial Mail Excluded from Measurement

(rev 11.07.19)

Resolutions

Use this link to contact [SPM Exclusion Feedback and Support](#) with any questions or feedback regarding the resolutions listed below. If you find additional root causes or actions to take that are not listed, then please send them to the same email link so they can be added.

Exclusion Reason	ID Defect	Confirm Root Cause	Take Action
Non-Unique Physical IMcb (actual container placard)	Duplicate IMcb scans associated with multiple containers	<ul style="list-style-type: none"> ✓ Mailer is not preventing use of duplicated container placards ✓ USPS is not using a unique 99Z trailer barcode for each trip of mailer transported containers that are unloaded at a USPS processing/network acceptance site ✓ USPS is not associating the 99T trailer barcode with either: 1) a departure scan between each trip of containers unloaded at the same USPS acceptance site, or 2) associating the 99T trailer barcode with an arrival scan at another USPS site 	<ul style="list-style-type: none"> ➤ Contact Mailer and request to not duplicate physical IMcb placards ➤ Mailer Transport: USPS operations ensure compliance with SV scanning SOP for mailer transported container acceptance (DMUVMT, Drop Ship) ➤ USPS Transport: USPS operations ensure compliance with SV scanning for trailer events
Orphan Handling Unit (tray, tub, or sack)	Mail piece is associated to a loose tray, tub, or sack (HU) that <u>was not inducted</u> at a BMEU	<ul style="list-style-type: none"> ✓ DMU verified tray, tub, or sack is not associated with a container in the eDoc 	<ul style="list-style-type: none"> ➤ Local site action is not available – DMU orphan HU's are always excluded
Unknown Entry Facility	No entry facility identified by the Locale Key, Postal Code or FDB ID provided in the mailer eDoc	<ul style="list-style-type: none"> ✓ Locale Key entry is ORIGIN <u>and</u> the Entry Point Postal Code is not valid for any USPS site ✓ FDB is not accurate (site missing, or wrong or missing locale key or postal code in site record) 	<ul style="list-style-type: none"> ➤ Contact mailer and request one of these eDoc entries are corrected for future mailings: 1) the Locale Key is a valid USPS site, or 2) the Entry Point Postal Code is a valid USPS site ➤ Escalate to local USPS AMS to correct data in FDB

7

No Start-the-Clock occurs when the induction method and/or the AET cannot be established by analyzing data from input systems, such as eDoc, PostalOne!, and Surface Visibility.

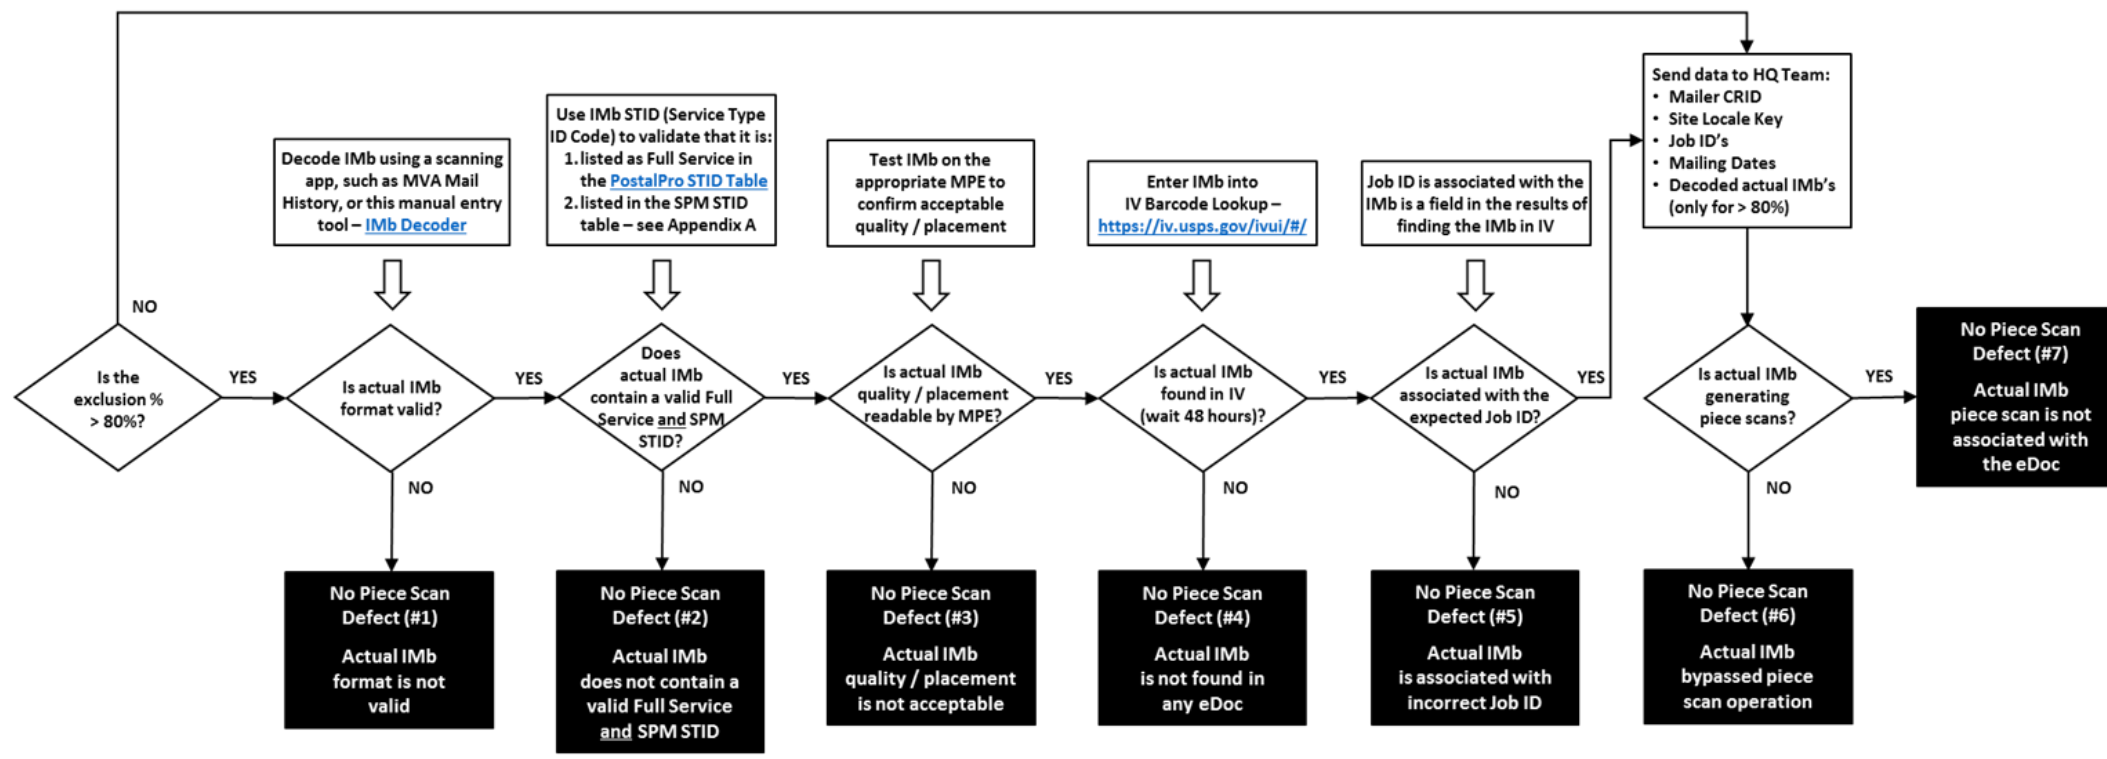

No Piece Scan occurs when the IMb codes provided in the eDoc do not receive USPS visibility scans in operations that establish the anticipated delivery date.

No Piece Scan ID Defect Chart

Use the Defect # shown to refer to the Resolution Guide for the Root Cause and Take Action items.

1. Answer the questions in the flow chart from left to right – follow the instructions above each diamond when provided.
2. For exclusion %'s from 80% - 100%, collect at least 25-30 actual IMb's from the mailing before proceeding to the second diamond – use a diversity of preparation levels, e.g. AADC, ADC, 3D, 5D, CR.

NO START-THE-CLOCK

OIG Audit on Mail in Measurement

The OIG conducted an audit on volume excluded from Service Performance Measurement.

Top 3 exclusion reasons from the OIG audit:

1. No Start-the-Clock
2. No Piece Scan
3. Long Haul

Root Cause

One of the main reasons identified for No Start-the-clock is due to electronic documentation not getting updated post finalization to reflect any changes to the actual mail (containers) being physically inducted.

Resolution

In order to reduce mail being excluded from measurement due to containers that are included in the finalized eDoc but not physically inducted, there needs to an approach to identify and remove containers that were not physically inducted from service performance evaluation.

1. Interim – Mailers provide USPS containers via email to be removed from service performance evaluation
2. Short Term – IV API to exchange data with mailers
3. Long Term – Update to Mail.dat spec so the mailers can submit changes via PostalOne! and all USPS systems (e.g. SV) will receive the update

LONG HAUL

USPS Transported Start-the-Clock Updates

Start
the
Clock

**Depart Mailer
Facility**

**Transmit
GPS Data**

Arrive Trip

Unload Trip

1. Mailer requirement:

- Content associated to trips through MVA, FAST or eDoc.

2. USPS requirement:

- Leverage breadcrumb data collected from MVA, PVS, or OrbComm to determine mailer facility departure.
- Perform container unload scan to verify possession of content associated to a specific DMU trip/trailer.

3. USPS STC update:

- Actual Entry time will be set to the time the trailer departs the mailer facility based on the first GPS breadcrumb time that breaks the mailer facility geo-fence.

* When the above requirements are met, Long Haul trips have potential to be included in measurement

TRANSPORTATION UPDATE

Accomplishments

- 12/3/2019: Reviewed and Updated Mission Statement, Objectives, and Impact/Desired Results/Area of Focus

 - Additional eDoc fields to include
- Define Provisioning
 - To IV, PostalOne! and FAST: Determine how data will be received to associate content to appointments
 - From IV: Determine what data will be provisioned back from IV

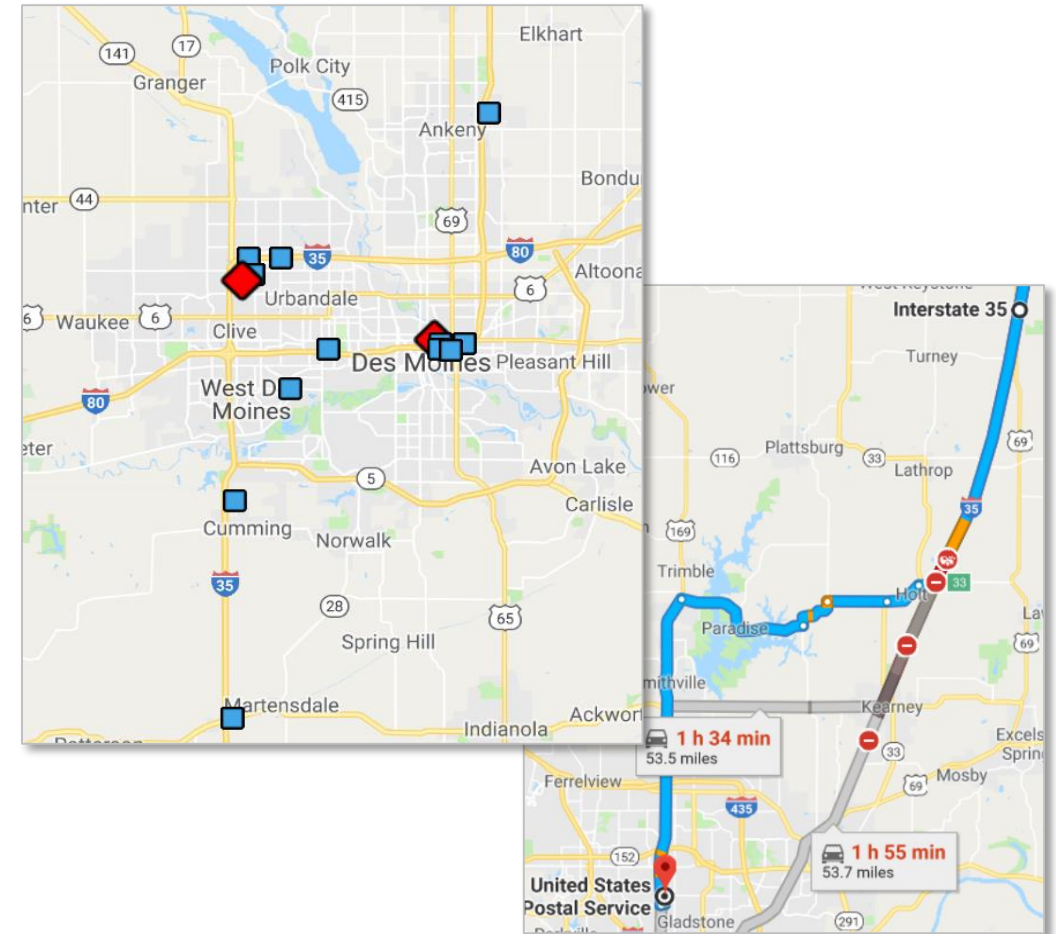

Completed 4 pilots successfully testing GPS transmission and arrivals based on GPS coordinates.

Summary

- Completed pilots to test out GPS transmission and Geo based arrival at drop shipment facilities across the country
- Further pilots will test two-way communication and interaction with the USPS dock personnel to confirm appointments and schedule dock doors

Findings

- GPS Float: Precision on the trackers needs to be set at a level to identify when in the facility polygon to leverage the time for arrival
- GPS Frequency: To leverage the GPS data for geofence breaks the frequency needs to 1 min pings to ensure time at the facility is properly recorded

Tracked 7 long haul trips leaving Pitney Bowes Des Moines Detached Mail Unit to multiple USPS facilities over the week of November 19th

Tracking Summary

Tracking

- All trailer load and depart events transmitted to all downstream systems including SV, IV and PTR.
- GPS Tracking of 7 trailers over 2 days of departures
- Load Scans performed at the DMU on 11/20 for 2 trips

Reporting

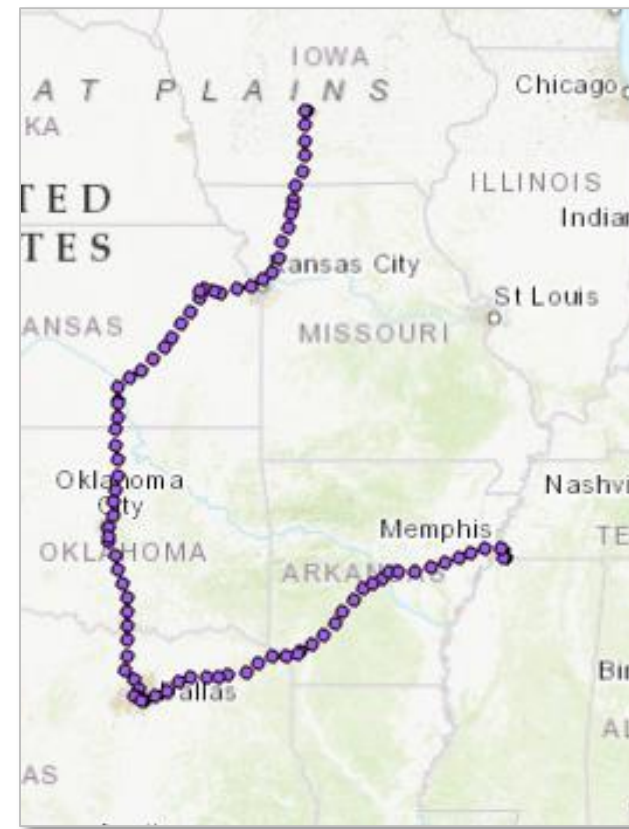

- Geo Site Depart Events captured by TRP-GEO for 7 trips
- GPS Breadcrumbs – 7 trips

Date	Route	Trip	Destination	Trailer Barcode
11/19	840L3	8433	SALT LAKE CITY STC, UT	99T000000255679

11/20	840L3	8433	SALT LAKE CITY STC, UT	99T000000168176
11/20	500AE	4607	INDIANAPOLIS P&DC, IN	99T000000342422
11/20	500AE	4625	INDIANAPOLIS STC, IN	No login to app

Through each of the 7 trips valuable data was captured to give USPS visibility and allow for additional mail to be included in measurement

Key Findings

- GPS trackers provided the initial break at the DMU in all cases when MVA TV data was used.
- MVA provided load scans for 2 trips departing on 11/20
- The pilot illustrated the potential to significantly increase visibility throughout the surface network.

Key Requirements

- IV-MTR will receive campaign data and provision access to mailers through standard IV-MTR application features and options.
 - IV will provision data using existing real-time data feed types/file formats
- IV will only provide Informed Delivery Post-Campaign detailed report data.
 - Post-Campaign summary report data will not be available in IV (future enhancement).
 - Post-Campaign summary data will continue to be available on the Mailer Campaign Portal
- Delegation rules will be similar to existing rules within IV
- ID data will also be available via One Time Query

- Unexpected Event Reporting continues in design and development
- Expect to provision data in future
- No timeline is available at this time

PRIORITY MAIL OPEN AND DISTRIBUTE

- In FY20 Q1, ~84% of PMOD were delivered within service standard

Addressing & Geospatial Technology
National Customer Support Center
Memphis, TN**

UPDATE STANDARDS REVIEW

Survey Results

- 84% respondents perform activities that impact mail production and mailing.
- 94% receive database product updates electronically and 84% receive them monthly or more frequently.
- 100% update their list every 60 days or more frequently and 99% are able to mail within 2 months after updating.
- USPS will be reviewing results with other internal stakeholders to assess impact
