INDEX

NOTE: In general, index entries are identified by their ALM Requirement ID and/or ALM Item ID, with references as shown below. Where two numbers are shown, the requirement number is indicated by "-R".

Application	Suffix Identifier ("-*X*")
Package Platform	PI: ALM Item numbers

1.0 Introduction

On Thursday, January 30, 2020, the United States Postal Service implemented the following software change:

- Package Platform Release 2.0.2.0

These Release Notes provide the contents of the release and affected subsystems.

The section titled *Corrections to Known Issues* is derived from External Trouble Reports (ETRs) and Engineering Change Requests (ECRs) for inclusion in this release.

This document is prepared based on the knowledge available at the time of its publication and any element may be subject to change prior to publication.

2.0 Package Platform – Corrections to Known Issues

2.1 Pricing Service

- The Package Platform Pricing Service was updated to properly price Merchandise Return (MR) pricing requests that have a Universal Product Code (UPC) barcode. Prior to this release, MR pricing requests that had a UPC barcode and trusted dimensions large enough to activate the dimensional weight calculation were incorrectly identified as dimensional instead of using the UPC attribute to price. 938-PI

- The Pricing Service was updated to properly price flat rate UPC barcodes. Previously, some mailers were incorrectly charged the $12.80 public rate for packages that should have received a flat rate for specific UPC barcodes. Adjustments were created for the impacted packages. 948-PI
