1.0 Introduction

On Thursday, March 12, 2020, the United States Postal Service implemented the following software change:

- Package Platform Release 2.0.5.0

These Release Notes provide the contents of the release and affected subsystems.

The section titled **Corrections to Known Issues** is derived from External Trouble Reports (ETRs) and Engineering Change Requests (ECRs) for inclusion in this release.

This document is prepared based on the knowledge available at the time of its publication and any element may be subject to change prior to publication.

2.0 Package Platform – Corrections to Known Issues

2.1 Data Service

- The Data Service was updated to prevent an error from occurring when inserting (adding) and updating transactions to the data subscriptions table for a string of multiple Customer Registration IDs (CRIDs) longer than 4000 characters. More than one CRID can be provided in an update or insert transaction for a data subscription. Previously, update or insert attempts where the transaction included a string of CRIDs exceeding 4000 characters could encounter an error which prevented them from being inserted/updated in the data subscriptions table. The subscription data update/insert logic was moved inside the application logic to prevent the issue from occurring for transactions going forward. [1012-PI](#)
- The Data Service was updated to remove the dependency on scan data for generation of the final notification data that is provided to mailers. Previously, the scan data was needed because the final notification did not include all the necessary data elements. With this update, all data elements are included in the final notification; therefore the scan data dependency was removed. [1004-PI](#)

3.0 Document History

Date	Version	Section	Description
03/12/2020	Change 2.0	All	Updated to reflect post-deployment language
