## **ZONE ANALYSIS PROGRAM (ZAP) CERTIFIED PRODUCTS LIST**

### **INTRODUCTION**

#### **What is ZAP?**

The United States Postal Service (USPS) Zone Analysis Program was developed to assist publishers and postal personnel in verifying that the zones are properly assigned to Periodicals mail based on the USPS National Zone Chart Matrix. Complete zone analysis verification is performed at least once a year for each publication. The office serving the publisher's original entry or additional entry office performs this verification. Zone information is provided as part of the documentation in a standardized format, or via a mail.dat input.

*ZAP also has the capability to verify the correct zone allocation of mailed periodicals, including the option of identification as In-County or Out of County. ZAP also verifies which software produces hard copy documentation for the mailing.*

#### **ZAP Program Levels of Approval**

**Option 1:** This process is performed by the National Customer Support Center (NCSC), BMA Certification Department, located in Memphis, TN. The software developer must submit test software electronically to the NCSC for verification of proper zone assignment and that the USPS electronic data (zone charts) is the key source being utilized.

- Must use current PAVE-certified presort software product.
- Must use the current USPS national zone chart matrix in determining the zone for each piece of mail.
- Postage statement facsimiles must be generated from either the PAVE-certified software or via mail.dat files.
- USPS Qualification Reports and PS Form 3541, must reflect Zone Analysis Program (ZAP) approved status and the effective date of the zone chart matrix.
- ZAP-approved vendors are listed at <https://postalpro.usps.com/certifications>.
- If developers' software products are "ZAP" approved, no annual zone summary of the postage payment review is required.
- Publishers using ZAP approved software, must attest to this with each mailing by the signing of the PS Form 3541.

**Option 2-A:** This process is performed by the NCSC where the software is tested and verified for proper zone assignment and that the USPS zone chart matrix is the key source utilized. This process also checks hard copy output.

- The developer's software must either produce a Mail.dat file or processes a USPS Universal File Format test file, to participate in ZAP testing.
- The software must use the current USPS national zone chart matrix in determining the zone for each piece of mail.
- Publisher(s) must use computer generated software and corresponding computer generated postage statements to assign correct zone information.
- USPS Qualification Reports and optional PS Form 3541 statements, must reflect Zone Analysis Program (ZAP) approved status and the date of the zone chart matrix.
- ZAP-approved vendors are listed at <https://postalpro.usps.com/certifications>.
- If developers' software products are "ZAP" approved, no annual zone summary of the postage payment review is required.
- Publishers using ZAP approved software, must attest to this with each mailing, by the signing of the PS Form 3541.

**Option 2-B:** This process is performed by the NCSC where the software is tested and verified for proper zone assignment and that the USPS zone chart matrix is the key source utilized. This process has no hard copy output.

- The developer's software must either produce a Mail.dat file or process a USPS Universal File Format test file to participate in ZAP testing.
- The software must use the current USPS national zone chart matrix.
- Publisher(s) must use computer generated software to assign correct zone information.
- The publisher must present the mailing information to the USPS in a format readable by the USPS at the time of mailing.
- ZAP-approved vendors are listed at <https://postalpro.usps.com/certifications>.
- If developers' software products are "ZAP" approved, no annual zone summary of the postage payment review is required.
