INTRODUCTION

What is MAC Batch?

The Manifest Analysis and Certification Batch (MAC Batch™) program is a process designed in cooperation with the mailing industry to evaluate presort/manifest software for First Class Automation Letters and Flats (tray based) utilizing Permit Imprints for accuracy in sorting address files according to the Domestic Mail Manual (DMM). MAC Batch is available only to software developers, i.e., companies that develop presort/manifest software for resale or internal use.

Participation in this program is purely voluntary. Although this program evaluates and validates presort/manifest products manufactured by software developers, MAC Batch does not guarantee acceptance of mail prepared using MAC Batch certified software. MAC Batch does provide national approval of computer generated facsimiles of United States Postal Service® (USPS®) postage statements, standardized documentation, and other presort/manifest documentation.

The MAC Batch Certified Products List contains products that have passed the rigorous testing procedures of the MAC Batch program. The list is organized alphabetically by company name. Each product's listing includes sales contact information and indicates the certified presort categories, presort-related options supported, hardware, software platforms, and price range.

Please keep in mind that the product information is for quick reference purposes only. You should contact the developer directly for specifics concerning their product.

Each product provides the required USPS Qualification Report (standardized documentation) needed for mailing under the Classification Reform requirements effective July 1, 1996. Some products also provide postage statement facsimiles, barcoded tray/sack tags, and additional documentation for the mailer's use. These options and others are indicated in the "Options Supported" section for each product listing.

Developer Categories

Software Developers for Retail Companies whose products have successfully completed the MAC Batch certification process and are developed for use/purchase by the general mailing public.

In-House/Proprietary Use Companies that have successfully completed the MAC Batch certification process and presort their own mailings.
