1.0 Introduction

On Sunday, September 3, 2017, the United States Postal Service plans to implement changes to the following software:

- *PostalOne!* System Release 45.3.1.2

These Release Notes provide the contents of the release and affected subsystems.

The sections titled **Corrections to Known Issues** are derived from External Trouble Reports (ETRs) and Engineering Change Requests (ECRs) for inclusion in these releases.

This document is prepared based on the knowledge available at the time of its publication and any element may be subject to change prior to publication.

2.0 Mail.dat Client Support

Please note the following regarding the Mail.dat client download.

There is no new Mail.dat client version with this release. Users should continue to use Mail.dat client version 45.3.1.0_PROD from the Business Customer Gateway (BCG) using the following path: Mailing Services → Electronic Data Exchange [Go to Service] → Mail.dat download (Windows 32-bit, Windows 64-bit or Solaris).

3.0 *PostalOne!* System – Corrections to Known Issues

3.1 Reports

Error handling logic for the process that sends monthly assessment email messages will be updated to ensure the database connection is closed when the process encounters an error that prevents the email from being sent (e.g., invalid email address). Currently, the process fails to close the database connection when it encounters an error that prevents sending the email message. As a result, the process can exceed the connection limit imposed by the Oracle database. When this occurs, mailers for whom an initial email message attempt fails due to an invalid email address may not receive monthly assessment notifications. When the process is rerun, mailers with valid email addresses may potentially receive duplicate email notifications. [11314 \(18840-R\)](#)
